

AN EXCLUSIVE RESEARCH ON HEALTH AND WEALTH OF SCHEDULED TRIBES AT KODAIKANAL.

Dr. R. Poornimarani

Assistant Professor, Department of Commerce, Mother Teresa Womens University-Kodaikanal.

ABSTRACT

Our Indian government they have taken various measures to solve the problems of poverty and unemployment among rural households. But if we take peoples in hill stations they are very rural and these tribes are very cautious in agricultural cultivation, so now they are above the poverty line.

KEYWORDS : Indian government , hill stations , Health and Wealth Of Scheduled Tribes .

INTRODUCTION

The labours are taking land on lease these activities enlarge the scope of the workers to get employment opportunities and earn their lively hood.

It is not true that development of the economy would lower the proportion of labour forced engaged in agriculture cso survey agriculture cultivates like live stock production, agro accessarries, hunting forest.

At present working area was limited to their own villages some other neighbour.

There are various reasons for wage variations and also wages given to the workers in various occupations are disperate that is between male and female.

We have noted that movements of true bad conditions of blocking of roads in rainy season and also due to bad weather.

Most of the workers involved in agriculture have to travel 12 to 18 kilometers from their hill stations considering two to four times journey home to worksite.

With above study knows kodaikanal hill station is a luxury paradigm for tribes

OBJECTIVES:

- 1) To study the health and wealth of scheduled peoples in kodaikanal hill stations.
- 2) To know what type of cultivation they are involved in kodaikanal hill stations.
- 3) To evaluate the age of peoples adopted in cultivation
- 4) To know ratio of male and female involved in cultivation
- 5) To suggest some useful measures to scheduled tribes category peoples involved in cultivation of kodaikanal hill stations.

RESEARCH METHODOLOGY:

Period of the study: Six month field study.

Sample size: 200

Data: primary data and secondary data

collected through observation method.

DATA ANALYSIS:

TABLE NO:1 WHO INVOLVED IN CULTIVATION

S.NO	TYPE OF COMMUNITY	PERCENTAGE
1	BACKWARD	10%
2	GENERAL TRIBES	5%
3	MOST BACKWARD CLASS	25%
4	SCHEDULED CASTE	10%
5	SCHEDULED TRIBES	120%
6	OTHER CASTE	10%
	TOTAL	200%

INTERPRETATION:

From the table 1 we came to know that backward scheduled caste and other caste people 10% were involved in agriculture but at the sametime general tribes 5% most backward 25% scheduled tribes 20% of scheduled tribes were involved in cultivation at hill stations.

TABLE NO:2 AGE OF THE CULTIVATORS IN HILL STATIONS

S.NO	AGE	YOUNGSTERS	ABOVE	ABOVE MIDDLE AGE	TOTAL
1	15-25	127(200)	73(200)	27(200)	200
2	25-35	50(200)	88(200)	62(200)	200
3	35-45	20(200)	32(200)	148(200)	200
4	45-55	3(200)	7(200)	166(200)	200

INTERPRETATION:

From the table we came to know that among 200 samples only 166 peoples involved in agriculture and they are in the age group of 45-55 they are above middle age group.

TABLE NO:3 TYPE OF CULTIVATION

S.NO	FLOWERS	FRUITS	VEGETABLES	TOTAL
SCHDULED TRIBES	30	70	100	200
SCHEDULED CASTE	60	30	10	200
BACKWARD	70	40	90	200
GENERAL	40	60	0	200

INTERPRETATION:

From the above table we came to know that vegetable cultivation 10% were of scheduled tribes 70% of fruit cultivators are scheduled tribes 70% of flower cultivators are of backward classes.s

FINDINGS:

1. From the above table it indicates that most of the peoples who belongs to scheduled tribes is mostly depends upon cultivation in hill areas that 125% of peoples to scheduled tribes category which is almost higher than the other categories'.
2. If we calculate the age of the cultivators in hill stations who depends upon fully on yielding most of the youngsters that is in the age of 15-25. Depend on agriculture that is 127%.when we compare to sample size 165% are in middle age group.
3. From the table no .3 indicates the type of cultivation with category of people.fruits&vegetables cultivation belongs to st category fruits is 70% and usage 100% as compared to other category of people.

CONCLUSION:

According to this research study health of their marketing wealth of agriculture involved on hill station are cultivation and natures gift of yielding so these peoples should be supported by more financial institutions involved in agricultural financing so that these tribes will surely get a hump in their life style and in their economy.
